

PRODUCT ANALYSIS & UX IMPROVEMENT PROPOSAL

App Name: Mi Music

Prepared By: Prisha Iuhar

Role: Product Management Case Study

Date: 25 May 2026

1. PRODUCT OVERVIEW

Mi Music is Xiaomi's default music application that allows users to stream music and play offline audio files. The app combines music discovery, recommendations, playlists, and short-form content inside a single platform.

2. TARGET USERS

- Redmi/Xiaomi smartphone users
- Offline music listeners
- Casual music consumers
- Users looking for free music access

3. MAIN FEATURES

- Online music streaming

- Offline music playback
- Playlist creation
- Search functionality
- Recommendations
- Short video/music content

4. STRENGTHS OF THE APP

- Preinstalled on Xiaomi devices
- Easy access to offline music
- Large existing user base
- Free music availability
- Simple onboarding experience

5. PROBLEM IDENTIFIED

Problem:

The search functionality does not always provide accurate or expected results .The UI is also very simple for a music app.

Example Observation:

When searching for “On the Floor”, the app displayed unrelated short-form videos and mixed content instead of prioritizing the exact song match.

For UI, if a user gets the irrelevant result and user interface of the app is not very attractive user might not be interested in using the app again.

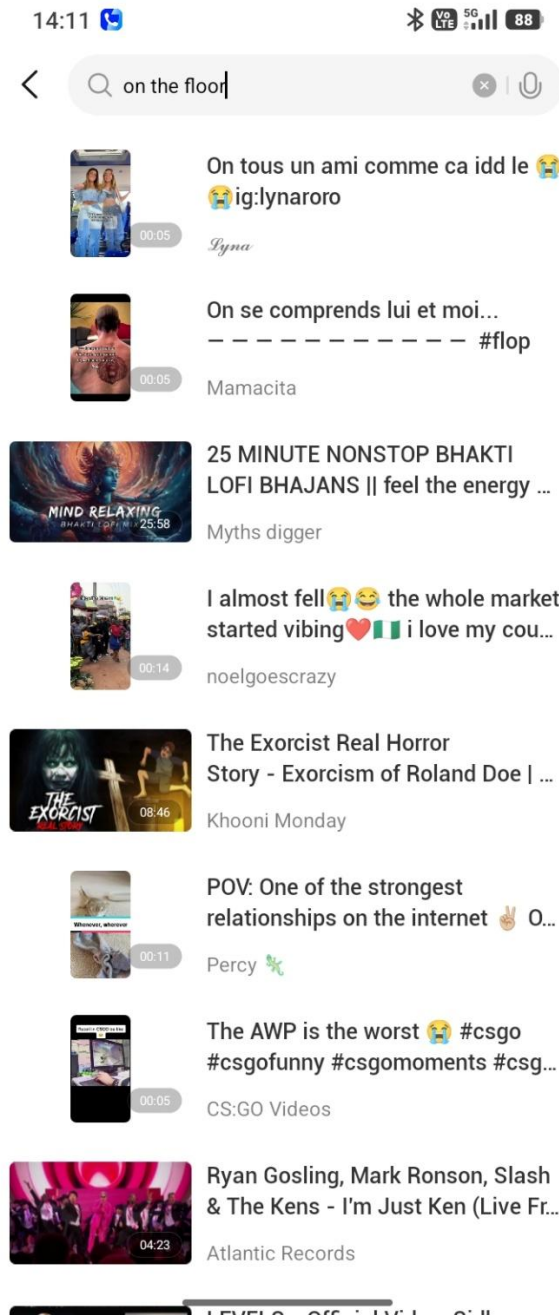

Figure 1: Mixed and irrelevant search results

6. USER IMPACT

- Users may struggle to find songs quickly

- Search experience feels cluttered
- Reduced trust in recommendation system
- Users may switch to competing platforms

7. ROOT CAUSE ANALYSIS

Possible reasons:

- Search algorithm prioritizes trending content
- No category-based filtering system
- Weak exact-match prioritization
- Too much mixed media content in results

8. IMPROVEMENT SUGGESTIONS

Suggestion 1:

Add search categories such as:

- Songs
- Artists
- Albums
- Videos
- Playlists

Suggestion 2:

Prioritize exact song matches before trending clips.

Suggestion 3:

Improve the UI of the application and try to make it more attractive for user add video representation in background for better user experience.

9. KPIs TO TRACK

KPI Purpose
----- -----
Search Success Rate Measures search accuracy
Search Abandonment Rate Tracks failed searches
Time to First Play Measures search efficiency
User Retention Measures long-term satisfaction

10. CONCLUSION

Mi Music has strong market reach because it comes preinstalled on Xiaomi devices. However, improving search relevance and reducing clutter could significantly improve user experience and retention.
